

CAPTOR

IRIS BOND

MONTHLY REPORT - NOVEMBER 2022

PORTFOLIO MANAGER COMMENT

A quiet start to the month with low volatility on longer interest rates turned over one afternoon into a sharp downtrend. For the first time since February, US inflation data was presented that was lower than market expectations. With a few exceptions, the Swedish ten-year swap rate has fallen continuously during the last two thirds of the month, from approx. 3.09% to approx. 2.68%. During the month, as expected, the Riksbank raised the key interest rate by 0.75 percentage points to 2.5%. While long-term interest rates have fallen, the shortest interest rates have remained stable, resulting in a strongly inverted Swedish swap rate yield curve. The interest rate market is pricing in a high risk of recession as early as next year when the key interest rate, after having passed a peak of approx. 3.25%, is expected to fall again in the fourth quarter of 2023.

The Swedish mortgage bond spreads have tightened and the four-year spread at the end of the month was around 32 basis points.

INVESTMENT GOAL AND STRATEGY

Captor Iris Bond is an actively managed fixed income fund. The capital is invested in ECBC covered bonds and bonds issued or guaranteed by Northern European sovereigns, local governments and supranationals. The fund will invest in green bonds provided that they fit within the investment strategy. The fund further utilises interest rate swaps to take positions in long maturity Swedish interests rates. As part of the strategy to maintain these positions the fund also trades in swaptions.

REASONS TO INVEST

The fund has long duration and is therefore able to earn the risk premia available further out on tradable Swedish Krona interest rate curves. This strategy has over time offered an attractive risk-adjusted return. The performance of these positions tend to be negatively correlated with those of risky assets such as equities, especially in times of market stress. Therefore the fund can be an attractive component in a balanced portfolio. The fund is also appropriate for investors with long dated liabilities.

HOW TO INVEST IN THE FUND

Some of the fund's share classes are available through Swedish banks and fund platforms. Furthermore, some share classes have a higher minimum investment, and for such share classes a dilution levy can be applied at subscription/redemption in order to protect the fund's shareholders. The process is the same as employed by exchange traded funds and also allows for physical creations/redemptions.

RISK PROFILE

The fund has a higher sensitivity to changes in interest rates, i.e. a higher "duration", compared to other fixed income funds available in Swedish Krona. Interest rate risk is the dominant riskfactor of the fund, larger than the credit exposure of the fund, given that the fund's capital is invested in ECBC covered bonds and bonds issued or guaranteed by Northern European sovereigns, local governments and supranationals.

William Sjöberg

William Sjöberg holds a MSc from KTH in Stockholm with financial mathematics focus and an education in quantitative finance from the CQF Institute. William has previously worked at Nordea for eight years in derivatives covering several asset classes.
