

CAPTOR

Aster Global High Yield

Monthly Report - May 2023

Portfolio Manager Comment

A quiet start to the month for Swedish interest rates turned to a steady rise in the middle of the month. The market's belief that interest rates will fall back quickly with falling inflation from the end of the current year weakened and the idea that interest rates will possibly stay here for a longer period spread in its place. The result was a sharp upward movement in interest rates, especially at the short end of the yield curve, where the two-year swap rate rose sharply, but the movement propagated all the way out into the curve. For credit spreads, the movement has been the reverse where spreads rose slightly at the beginning of the month and fell back in the second half.

European index widened about 1 basis point to 437 basis points and American index went from 464 to 475 basis points. In the European index, consumer staples has the highest spreads and during the month the communication sector has widened the most. For the American index, companies in communications have the highest spreads and also that sector where spreads widened the most.

Investment Goal and Strategy

The fund targets highly liquid exposure in European and North American High Yield credit, whilst keeping both currency and interest rate risk in Swedish Krona. To this end credit exposure is mainly assumed via index-based centrally cleared Credit Default Swaps (CDS). The Reference Indices of the CDS contracts are Itraxx Europe Crossover and CDX North America High Yield. The exposure to each issuer is equally weighted, ensuring a well-diversified portfolio.

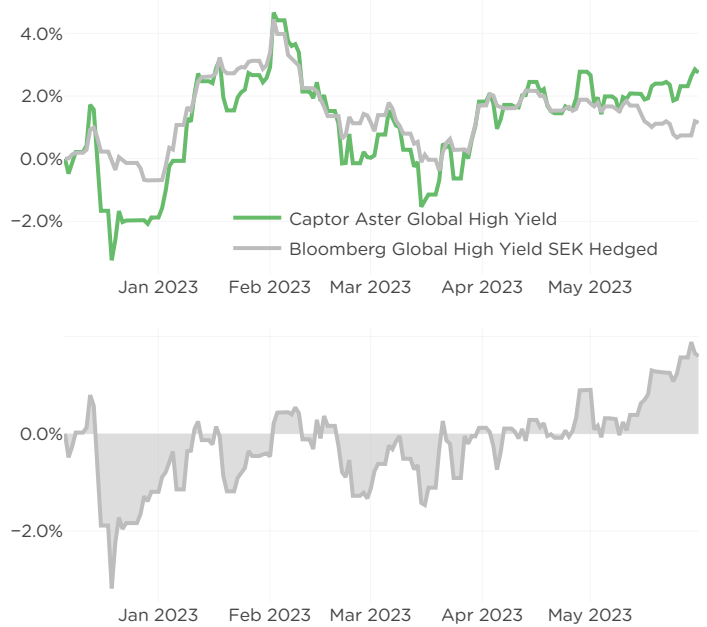

The fund is also allowed to invest directly in corporate bonds with the corresponding rating. When the exposure to corporate credit is assumed through CDS contracts, the capital of the fund is simultaneously in AAA rated SEK bonds, primarily Swedish covered bonds.

The fund takes positions that eliminate its exposure to companies that do not meet the sustainability requirements set up by Captor. The fund is classified as Article 8 according to the Disclosure Regulation.

Risk Metrics

Duration	3.32 years	CDS index EUR spread	437.11 bp
Credit duration (CDS)	4.45 years	CDS index USD spread	475.23 bp

Reasons To Invest

The fund is suitable for investors with home currency in Swedish Krona looking for attractive risk-adjusted returns through a well-diversified exposure to global high yield credit. The strategy is suitable for investors looking for liquidity in all market conditions.

By construction the strategy effectively avoids being directly exposed to EUR or USD long term interest rates. In addition, the fund avoids all costs typically associated with hedging foreign currency back into Swedish Krona.

How To Invest In The Fund

Some of the fund's share classes are available through Swedish banks and fund platforms. Furthermore, some share classes have a higher minimum investment, and for such share classes a dilution levy can be applied at subscription/redemption in order to protect the fund's shareholders. The process is the same as employed by exchange traded funds and also allows for physical creations/redemptions.

Risk Profile

Credit risk is the dominant risk factor in the fund. It is exposed to credit spreads of both its bond positions and its position in CDS contracts.

Portfolio managers

Daniel has fifteen years of experience in trading fixed income, equity and currency products. He has previously worked as a quantitative analyst and asset manager at Handelsbanken and built up and managed a derivative portfolio at Industrivärden.
